

Principal Sustainable Asian Allocation Fund

Generate Potential Returns Through Investing For A Sustainable Future

Q4 2022

Important Notes

- The Sub-Fund will primarily (i.e. at least 70% of the Sub-Fund's Net Asset Value) invest in a diversified range of assets and securities (including equities, equity related securities and debt securities) of companies and issuers in Asia Pacific (ex-Japan) which are considered to be outperforming their peers with respect to sustainability performance based on environmental, social and governance ("ESG") factors ("ESG leaders") as well as exchange traded funds ("ETF") and collective investment schemes ("CIS"), which primarily invest in equity or debt securities and companies or issuers that maintain better ESG profiles than their corresponding traditional counterparts (collectively "ESG-focused ETF/CIS"), and provide capital growth and income over medium to long term.
- These investments may be denominated in various currencies. The Sub-Fund will not aim to focus its investments on any single country or market capitalisation. However, investments in any country, the Asia Pacific region or market capitalisation may be concentrated, depending on the Fund Manager's Sub-Delegate's assessment of the market conditions at different times
- The Sub-Fund may invest up to 40% of its Net Asset Value in debt securities rated below investment grade (i.e. rated BB+ or below by Standard & Poor's or comparable ratings by Moody's Investors Services or Fitch Ratings) or in the case the credit rating is designated/assigned by a PRC (means the People's Republic of China excluding Hong Kong, Macau and Taiwan for purpose of this material) credit rating agency, A+ and below, or unrated. For the purpose of the Sub-Fund, "unrated debt securities" is defined as debt securities which neither the debt securities nor their issuers have a credit rating. While these credit ratings provided by the relevant rating agencies serve as a point of reference, the Sub-Delegate of the Manager will conduct its own assessment on the credit quality based on various factors, such as leverage level, operating margin, return on capital, interest coverage, operating cash flows, industry outlook, competitive position in the market and corporate governance. The Sub-Fund may from time to time invest less than 30% of its Net Asset Value in RMB-denominated debt securities and equity securities issued in the PRC, including China A-shares via the Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect or indirectly through all eligible instruments, the Qualified Foreign Investor ("QFI") regime, the China interbank bond market direct access program and/or China Hong Kong Bond Connect, as well as urban investment bonds which are debt instruments issued by local government financing vehicles ("LGFVs"). These LGFVs are separate legal entities established by local governments and/or their affiliates to raise financing for public welfare investment or infrastructure projects.
- Various countries in Asia Pacific in which the Sub-Fund may invest, including but not limited to the following countries: China, Indonesia, Malaysia, Philippines and Thailand, are considered as emerging markets. As emerging markets tend to be more volatile than developed markets, any holdings in emerging markets are exposed to higher levels of market risk. Holdings in emerging markets are also exposed to special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of volatility. The securities markets of some of the emerging countries in which the Sub-Fund's assets may be invested are not yet fully developed which may, in some circumstances, lead to a potential lack of liquidity. Accounting, auditing and financial reporting standards in some of the emerging markets in which the Sub-Fund's assets may be invested may be less vigorous than international standards. As a result, certain material disclosures may not be made by some companies. As a result, the Sub-Fund/investors may be adversely impacted.
- The use of ESG criteria may affect the Sub-Fund's investment performance and, as such, the Sub-Fund may perform differently compared to similar funds that do not use such criteria. For instance, ESG criteria used in the Sub-Fund's investment policy may result in the Sub-Fund forgoing opportunities to buy certain securities when it might otherwise be advantageous to do so, and/or selling securities due to such securities no longer meeting the Sub-Fund's ESG criteria when it might be disadvantageous to do so. As such, the application of ESG criteria may restrict the ability of the Sub-Fund to acquire or dispose of its investments at a price and time that it wishes to do so, and may therefore result in a loss to the Sub-Fund.
- The use of ESG criteria may also result in the Sub-Fund being concentrated in companies with a focus on ESG criteria and its value may be more volatile than that of a fund having a more diverse portfolio of investments. The selection of securities may involve the subjective judgement of the Fund Manager's Sub-Delegates. There is also a lack of standardized taxonomy of ESG criteria evaluation methodology and the way in which different funds apply such ESG criteria may vary. The Fund Manager and the Fund Manager's Sub-Delegates' ESG assessment takes into account ESG data and research from external data providers, which may be incomplete, inaccurate or unavailable. As a result, there is a risk associated with the assessment of a security or issuer based on such information or data.
- The Sub-Fund may also invest up to 10% of its net asset value in debt instruments with loss absorption features, which may include instruments classified as Additional Tier 1/Tier 2 capital instruments, contingent convertible bonds ("CoCos"), non-preferred senior bonds which may also be known as Tier 3 bonds and other instruments eligible to count as loss-absorbing capacity under the resolution regime for financial institution, in compliance with its investment policy and limits. These instruments may be subject to contingent write-down or contingent conversion to equity on the occurrence of trigger event(s).
- The Sub-Fund's net derivative exposure may be up to 50% of the Sub-Fund's net asset value.
- Investment involves risk. There is no assurance on investment returns and you may not get back the amount originally invested.
- The investment decision is yours but you should not invest in this Fund unless the intermediary who sells it to you has advised you that it is suitable for you and explained how it is consistent with your investment objectives.
- You should not rely solely on this marketing material when making your investment decision. You should read the Explanatory Memorandum and Product Key Facts of Principal Prosperity Series for further details (including investment policy, risk factors, fees and charges, and fund information).
- The dividend distributed by the Sub-Fund in respect of Income Class Units may be paid effectively out of the capital of the Sub-Fund (i.e. making the distribution from gross income while charging all or part of the relevant Sub-Fund's fees and expenses to capital), resulting in an increase in distributable income for the payment of dividend by the Sub-Fund and may result in an immediate reduction of the net asset value per unit of the relevant class. Dividend for Income Plus Class Units may be paid out capital. Such payment of dividend out of capital or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment in the Income Class Units or the Income Plus Class Units or from any capital gains attributable to that original investment. Dividend is not guaranteed.

* Target Yield is only available for income plus share class and refers to Q4 Target Yield, which is for reference only and subject to review every quarter and not guaranteed. Positive distribution yield does not imply positive return. Dividend is not guaranteed.

> What is ESG?

- ESG stands for Environmental, Social, and Governance. It is also called “sustainability” in many situations. Each pillar comprises a number of criteria that may be considered.

ESG At Principal

- ESG issues are becoming more important to Principal’s business and to our world. We believe having a strong commitment to ESG is not only the right thing to do, it can create tremendous business value for Principal.

Environment

- Decrease greenhouse emissions
- Eco-friendly fixtures
- Energy reduction
- Water efficiency
- Recycling
- Supply chain management

Social

- Diversity and inclusion
- Employee engagement
- Pay equity
- Supplier diversity
- Principal Foundation & Community Relations community investments
- Inclusive products and services

Governance

- Global code of conduct
- Anti-corruption and bribery
- Board structure
- Cybersecurity and data privacy
- Human rights
- Risk oversight

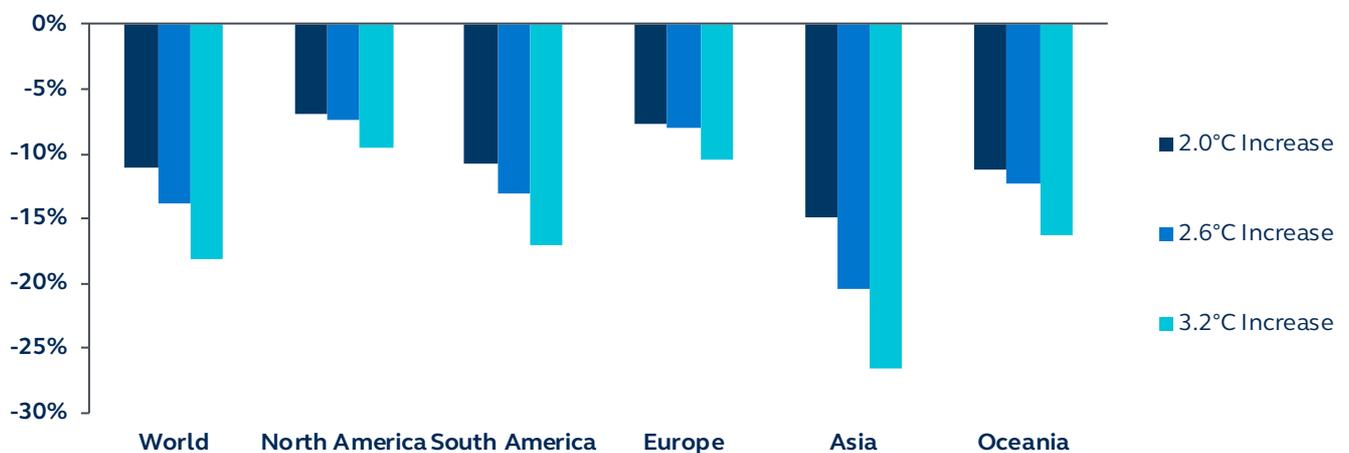

> Why Asian Sustainability?

Climate Risk in Asia – Time to Act¹

- Asia is, in many ways, on the front line of a changing climate. With many low-lying coastal cities exposed to flood and typhoon risk, Asia is expected to experience more severe socioeconomic impacts of climate change than global averages in the absence of adaptation and mitigation.
- Asian regions including Bangladesh, China, India, Indonesia, Japan, South Korea, and Vietnam will likely be impacted by physical climate risks, including dangerously high heat and humidity levels, sea level rise and flooding.
- Unless emissions are rapidly reduced and adaptations put in place, climate events may cause massive economic damage upon domestic and global infrastructure, supply chains, and labor capacity, with large impacts on Asian GDPs.

Temperature Rise Scenario Impact On GDP, By Mid-century

Simulating for economic loss impacts from rising temperatures in % of GDP, relative to a world without climate change

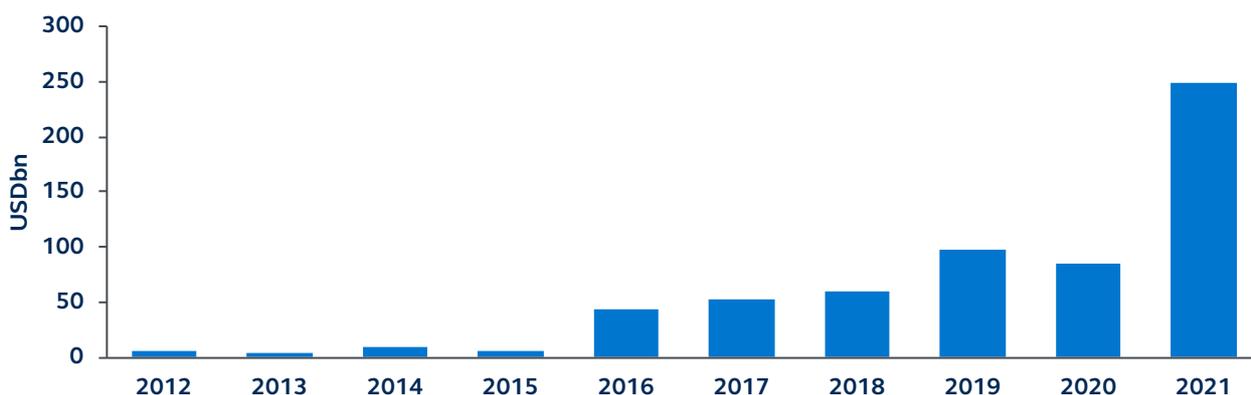

Asia ESG Trends are Here to Stay²

Countries	Target Type	Target Year	Status

Philippines 	Reduction v. BAU	2030	In policy document
Singapore 	Net zero	2050	In policy document

Fast-Growing ESG Debt Market³

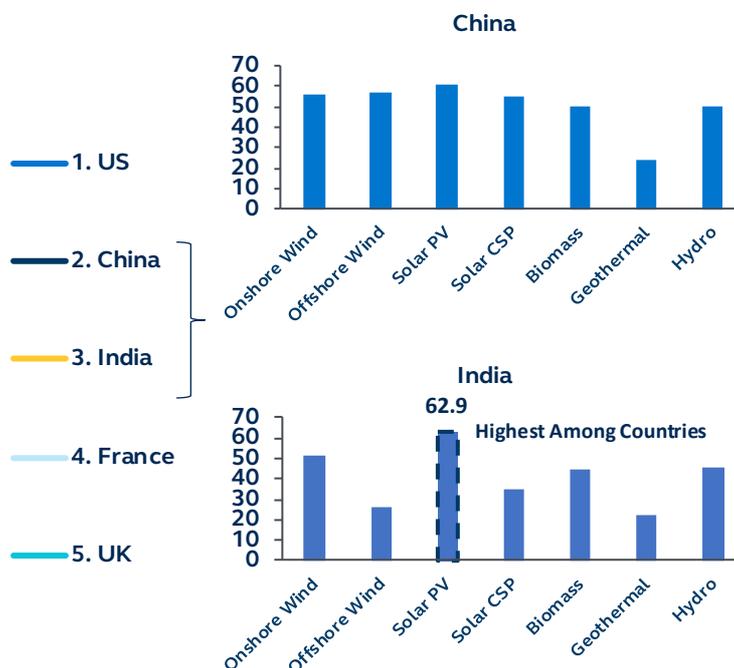

- The nascent sustainable debt market in Asia Pacific ex Japan continues its blistering growth with around \$250 billion of ESG issuance in 2021, more than a five-fold increase from its 2016 level.
- This is largely a result of issuers embracing corporate sustainability and governments acknowledging the importance of climate risk to economic sustainability. Across Asia, regulators are implementing initiatives to drive access and ESG disclosure, contributing to this growth.

Bloomberg Global-Aggregate Total Return Index	3.9%	2.4%	9.1%
Bloomberg US Treasury Total Return Index	2.0%	0.5%	3.6%

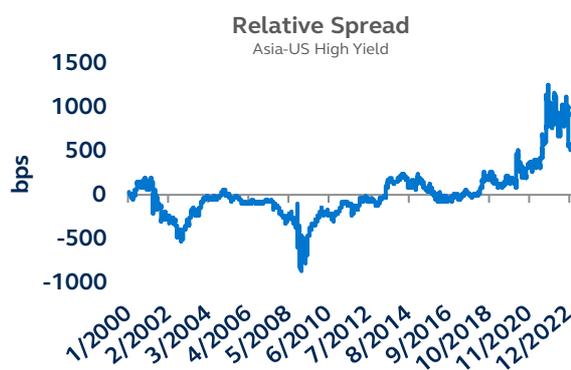

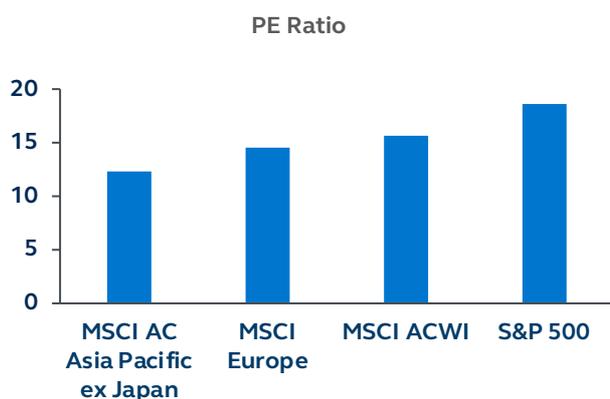

Robust Economic Growth Potential⁶

- Although the COVID-19 pandemic has caused hardship, Asia as a region exhibited resilience in the face of this extraordinary shock. GDP growth has proved relatively stable through the pandemic and is expected to rebound faster in postpandemic times.

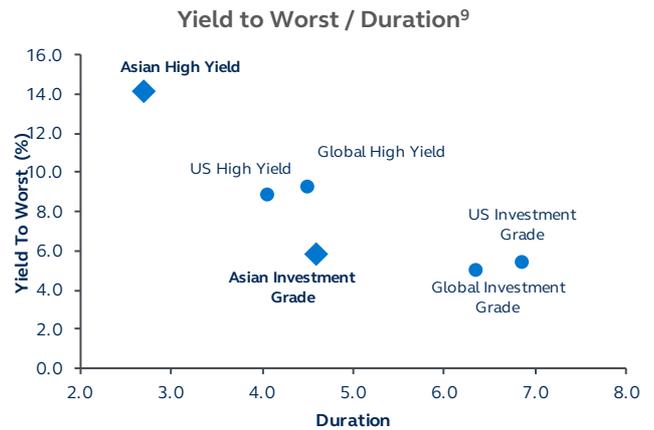

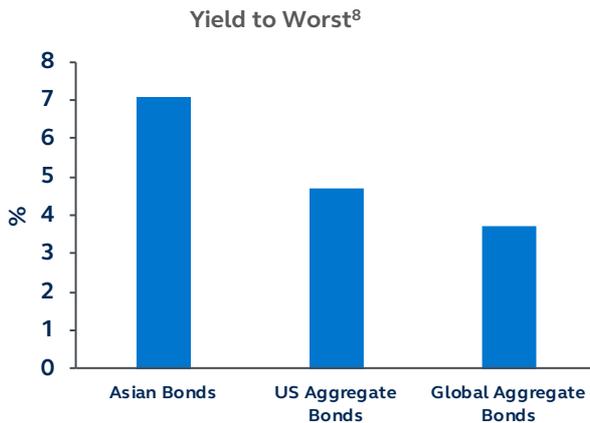

Attractive Relative Valuation⁷

- A growing number of Asian listed companies with diverse sectors offer a potential for a rich ground of potential alpha opportunities while their stock valuations are cheaper compared to other markets.
- With solid fundamentals, Asian bonds looked attractive over US bonds in relative value terms.

Competitive Yields Relative To Developed Markets

- While interest rates in developed markets are on the rise, Asia still possesses potential yield advantages. Benefiting from higher yields and relatively short duration, both Asian investment grade and high yield bonds have yield/duration ratios higher than their global counterparts. This may cushion the impacts of rising interest rates.

> Why Principal Sustainable Asian Allocation Fund?

Best-In-Class Strategy

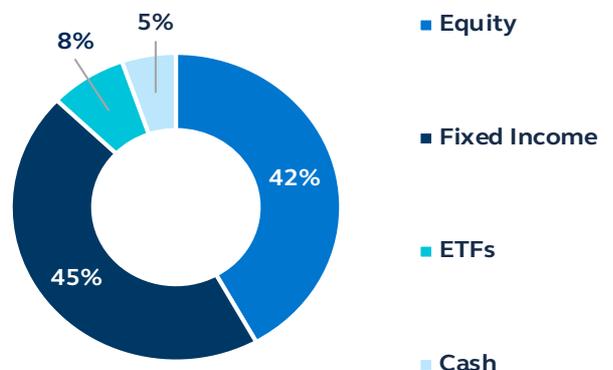

- All securities investable are screened with the aim of identifying ESG leaders¹⁰.

ESG Leaders ¹⁰ (≥70% NAV)	Transition Champions ¹² (≤30% NAV)
